CSE 2027

GitHub | LinkedIn | LeetCode | Portfolio

Summary

Final-year B.Tech CSE student at SRM Institute, 9.57 CGPA, top 5% of cohort. Best Paper Award at ICARECS 2026 for interpretable ML research. Interned at Infosys Springboard shipping production APIs and ML pipelines. Built and deployed six projects across backend, ML and full-stack. Open to SWE, backend and ML engineering roles and internships.

Education

B.Tech in Computer Science and Engineering

SRM Institute of Science and Technology, India

2023 – 2027

CGPA: 9.57 / 10.0 (Top 5%)

Skills

Languages: Java | Python | **SQL Backend:** REST APIs | Spring Boot | Hibernate | Flask | JDBC | Maven | RBAC | CI/CD | GitHub Actions

Databases: MySQL | PostgreSQL | Schema Design | 3NF Normalisation | Query Optimisation | Indexing **AI/ML:** Decision Trees | Random Forest | XGBoost | Naive Bayes | KNN | Logistic Regression | SVM | NLP | SHAP | scikit-learn

Data Science: Pandas | NumPy | Matplotlib | OpenAI API | LLMs | Prompt Engineering | Sentiment Analysis | Intent Classification

Tools: Git | GitHub Actions | Postman | VS Code | React 19 | Node.js | Express.js | TypeScript | Tailwind CSS | Recharts | Gemini API

Experience

Backend Engineering Intern, Infosys Springboard

Dec 2025 – Jan 2026 / 2 Months / Remote

- Built RESTful APIs and normalised PostgreSQL schemas for EcoPackAI on Flask; integrated Random Forest and XGBoost pipelines with SHAP explainability and a GitHub Actions CI/CD pipeline; parameterised all SQL to prevent injection. Attended weekly meetings with team and mentor to track progress and align on deliverables.

Operations & Process Improvement Intern, Agroho NGO

Jun 2025 – Jul 2025 / On-site

- Built Python scripts to track field operations data across 200+ NGO members; identified workflow bottlenecks through data analysis and supported process redesign that improved outreach coordination efficiency.

Projects

CryptoGuard: Decision Tree Risk Classifier [GitHub] [Live] – Python, scikit-learn, Decision Trees, NLP, REST APIs

- Problem:** Crypto markets lack interpretable, real-time risk tools; black-box models sacrifice explainability for accuracy.
- Solution:** Built an interpretable pipeline on 37,082 OHLCV records across 23 cryptocurrencies; Decision Tree hit **99.54% accuracy**, beating Random Forest, KNN, and Naive Bayes; exposed as a REST API, enabling traders to query real-time risk scores per asset before executing positions. **Best Paper, ICARECS 2026.**

EcoPackAI: Sustainable Packaging Recommender [GitHub] – Python, Flask, PostgreSQL, Random Forest, XGBoost, SHAP, REST APIs

- Problem:** Businesses manually weigh packaging cost, CO2, and material trade-offs with no explainability.
- Solution:** Built dual ML pipelines with SHAP explainability; parameterised SQL cut query latency **35%**; cut packaging decision time **~40%**

Student Database Management System [GitHub] [Live] – Java, JDBC, MySQL, RBAC, System Design

- Problem:** Manual academic record-keeping has no access control, leaving data open to privilege escalation and SQL injection.
- Solution:** Built a 3NF-schema DBMS with layered DAO/Service/Controller architecture, centralised RBAC, parameterised CRUD, and indexed JOIN queries.

Mann: Your Safe Space – AI Mental Health Assistant [GitHub] [Live] – React, TypeScript, Node.js, Gemini API, NLP

- Problem:** Mental health tools are generic and reactive, lacking personalisation and crisis detection.
- Solution:** Built a full-stack platform with MBTI-based personalisation, attachment-style mapping and CBT-inspired thought reframing across **64 personality-adaptive profiles** (16 MBTI types × 4 attachment styles), with a **Living Garden** visualisation and crisis-detection safeguards; experienced live by **2,000 attendees at SARAM Expo 2025. 2nd Prize, SARAM Expo 2025.**

CleanIQ – AI-Powered Validation Platform [GitHub] [Live] – HTML, TypeScript, Gemini API

- Problem:** Client transaction datasets have inconsistent phone/date formats that only surface after import, delaying onboarding.
- Solution:** Built a static, client-side validator with country-specific rules and a Gemini-powered chat layer for plain-English error queries and AI fix suggestions, auto-chunking large outputs into CSVs, with zero backend dependency.

FitMe: AI Fitness Assistant [GitHub] – React 19, TypeScript, Tailwind CSS, REST APIs, Recharts

- Problem:** AI-generated fitness plans are one-shot outputs with no structured layer, making tracking and analytics brittle.
- Solution:** Decoupled a typed REST middleware between AI plan generation and the analytics dashboard, catching schema mismatches at compile time and reducing runtime data errors to zero.

Achievements

- Best Paper Award, ICARECS 2026** – Decision Tree-Based Risk Classification for Cryptocurrency Trading.
- 2nd Prize, SARAM Expo 2025 (Rs. 25,000)** – Mann platform, experienced live by 2,000 attendees.
- 1st Place, Oratorical Competition (2023) | 2nd Place, Oral Presentation (2023).**

Publications

Decision Tree-Based Risk Classification Model for Cryptocurrency Trading – ICARECS 2026, **Best Paper Award.**

Certifications

Python for Data Science and Machine Learning, NPTEL IIT Madras (Elite Grade) Jan – Feb 2026 – 8-week course on supervised learning, data pipelines, applied ML.

Leadership

VP (Nov 2024 – Aug 2025) | **Lead, Tech & Innovation** (Aug – Nov 2024) | **Member** (Jan – Aug 2024), Intellects Club SRM Ramapuram – Led club operations, flagship events; organised hackathons; mentored on backend/API/AI-ML projects.

NSS Discipline Core Committee Member (Sep 2023 – Sep 2025) – Ran operations for 5+ campus-wide programs, 1,000+ participants.
